From Binance use ALGO network to withdraw to any exchange with the lowest fees and lowest min withdrawal limit

About me :)

This is something that I have documented over a period of a year and a half for my personal use. I think it does count as research.

The day I got my first prize for winning a hackathon was the same day I lost 90% of my crypto due to a hack.

But long before that, I was a true advocate of privacy and cyber-security.

I know the ins and outs of the web3 world and was a beta tester for **MASQ** dVPN and **Sarcophagus** for a short period of time.

Currently, I have multiple nodes running for **Sentinal** dVPN etc.

Rn I look for projects with innovative tech and have some privacy or cyber-security aspects. But ya it can change as required.

I am a Last Year Computer Engineer student. I try to value empathy & authenticity.

Why do you think I'd be a good fit?

I am a cybersec student, privacy advocate, was a beta tester, love authenticity, try to be unique, slow but thorough, good critic, know stocks n equities, carbon credits, want to earn by running nodes.

As a researcher, I'll scorch all the stuff and issues regarding running a node. Also running multiple sentinel nodes so will back it up with that experience. I have a Twitter account where I only follow privacy and cybersec projects. Not restricted to nodes tho open to everything.

Past Experience.

No professional experience. I just google and ask doubts in communities. For ex. I want to be a node dvpn node runner from India but the regulation here are pretty not good, so I found of the jurisdictions where laws are favourable, found out cheap vps providers who allow tor traffic, accept crypto payments,

requires no kyc. got some aggregators like kycnot.me, bitcoin-vps.com, lowendtalk.com, serverhunter.com also have some list on my own. for regulations found out alliance like <https://dvpnalliance.org/exit-node/> also visited tor website.

I want to slowly end my dvpn nodes and get into the validator nodes.
